

chirality **FIRST TIME RIGHT**

Syncom offers a unique new service set up to tackle virtually all chirality issues. The strategy is based on simultaneous screening of various chiral technologies at the early phase of development, namely:

- Resolution
- Biocatalysis
- Chemocatalysis
- Preferential Crystallization
- Chiral Chromatography
- Chiral Pool Synthesis

These screenings will run in parallel with synthesis, optimization and production up to kilogram scale, saving you valuable time and money. Our open mind towards and familiarity with all chiral technologies have proven time and again to be effective and competitive.
